Clinical Services | Screening & Prevention Program

What to Expect

What is a screening & preventative health visit?

The visit provides you with a range of services designed to screen for, and help prevent certain health conditions, including cancers. These visits may include screenings, immunization updates, or referrals to other health professionals, including your primary physician.

Why I should book a screening & prevention visit:

These visits will help you ensure your information is up to date and accurate. Visits will identify what screenings are suggested for your demographics. This visit can also assist your health team with extra supports you may request or require within your health journey.

What happens during the planned visits?

At the visit, we will ensure your immunizations are up to date. Depending on certain information and criteria, screening tests maybe ordered and/or completed. We will complete a set of vitals including your blood pressure, temperature, oxygen rate, and pulse. Your height and weight with BMI will be recorded in your chart. We will discuss your goals, any concerns you might have, and offer ways we can support you.

Will my physician review any health concerns during the visit?

If you have concerns that cannot be managed at the visit, your healthcare provider will be made aware, and a separate appointment will have to be made to discuss these concerns. Your physician will also be notified of any results from screenings completed during this visit.

Next Steps

1

Book your appointment

By calling or texting our team at 403-499-8158.

2

During your appointment

The nurse will go over assessments, screening and any follow-up visits you may need.

3

After your appointment

You will have more information to guide your health, and there may be more screening appointments. Your physician will also be given relevant information.
